

green is not just a colour to us

Plascon South Africa strives to inspire more ecological considerate decisions throughout our business. We have responded to the challenge by innovating unparalleled sustainable solutions based on the 3 fundamental pillars of compliance, sustainability and products.

Compliance = Green Processes

Several Environmental Management Systems have been implemented in all of Plascon's South African Manufacturing Plants and in 2005, we attained ISO 14001 certification at all of our plants.

Sustainability = Green Practices

Pioneering ground-breaking processes have been implemented to ensure that we are starting on ground level. Our processes focus strictly on achieving complete sustainable progression.

Products = Green Products

Plascon is dedicated to provide industry-first solutions, through quality, environmentally-aware products, which do not compromise the finished product performance or our world.

- Plascon Premium Brands – Double Velvet (white and pastel tint base), Cashmere (white and pastel tint base) and several of our Plascon Professional products all have VOC levels lower than 16g/ℓ when tinted with Plascon Inspired Colour colourants
- Using the world's most innovative raw materials and technologies, the new Plascon Professional Evolution product range is both VOC and Solvent-free
